

...and More Features

To notify, or not to notify?

The Notify watchers checkbox remembers your choice on a per-page basis. If you've chosen not to notify watchers on a particular page, it'll be unchecked next time you edit that page again.

Say goodbye to unknown attachment fails

When you copy content from the editor and paste it into another page we'll re-attach any images for you, automatically. You'll be seeing a lot less of the dreaded "unknown attachment" error.

One-click create for blank pages

To save time when creating blank pages, we're taking the process from 3 steps down to 1 with our new 'quick create' option. Instead of a single create button in the header, you'll now see two options: Create (blank page) and Create from template.

Making it your Favorite, just got easier

The Save for later option (previously called Favorite) has been moved out of the menu and right next to the Edit button, making it faster and easier to mark something as a favorite.
