

Frameworkx Specification

Product Catalog Management API REST Specification

TMF620
Release 14.5.1
June 2015

| | |
|---|--------------------------|
| Latest Update: Frameworkx Release 14.5 | TM Forum Approved |
| Version 2.0.2 | IPR Mode: RAND |

NOTICE

Copyright © TM Forum 2015. All Rights Reserved.

This document and translations of it may be copied and furnished to others, and derivative works that comment on or otherwise explain it or assist in its implementation may be prepared, copied, published, and distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice and this section are included on all such copies and derivative works. However, this document itself may not be modified in any way, including by removing the copyright notice or references to TM FORUM, except as needed for the purpose of developing any document or deliverable produced by a TM FORUM Collaboration Project Team (in which case the rules applicable to copyrights, as set forth in the [TM FORUM IPR Policy](#), must be followed) or as required to translate it into languages other than English.

The limited permissions granted above are perpetual and will not be revoked by TM FORUM or its successors or assigns.

This document and the information contained herein is provided on an "AS IS" basis and TM FORUM DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

TM FORUM invites any TM FORUM Member or any other party that believes it has patent claims that would necessarily be infringed by implementations of this TM Forum Standards Final Deliverable, to notify the TM FORUM Team Administrator and provide an indication of its willingness to grant patent licenses to such patent claims in a manner consistent with the IPR Mode of the TM FORUM Collaboration Project Team that produced this deliverable.

The TM FORUM invites any party to contact the TM FORUM Team Administrator if it is aware of a claim of ownership of any patent claims that would necessarily be infringed by implementations of this TM FORUM Standards Final Deliverable by a patent holder that is not willing to provide a license to such patent claims in a manner consistent with the IPR Mode of the TM FORUM Collaboration Project Team that produced this TM FORUM Standards Final Deliverable. TM FORUM may include such claims on its website, but disclaims any obligation to do so.

TM FORUM takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this TM FORUM Standards Final Deliverable or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights. Information on TM FORUM's procedures with respect to rights in any document or deliverable produced by a TM FORUM Collaboration Project Team can be found on the TM FORUM website. Copies of claims of rights made available for publication and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this TM FORUM Standards Final Deliverable, can be obtained from the TM FORUM Team Administrator. TM FORUM makes no representation that any information or list of intellectual property rights will at any time be complete, or that any claims in such list are, in fact, Essential Claims.

INTRODUCTION

The following document is the template for the REST API documentation.

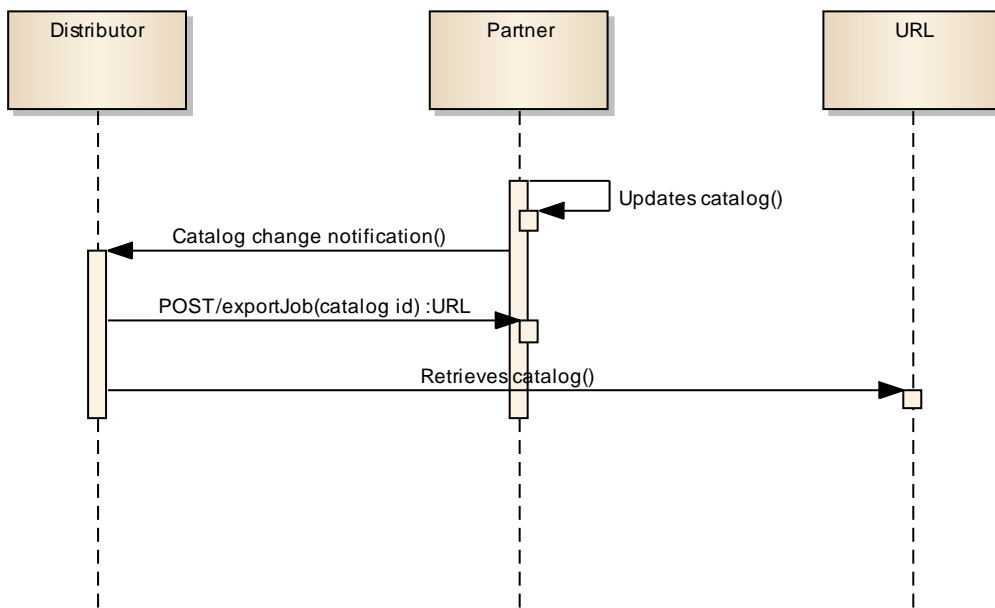

The catalog management API allows the management of the entire lifecycle of the catalog elements, the consultation of catalog elements during several processes such as ordering process, campaign management, sales management...

SAMPLE USE CASES

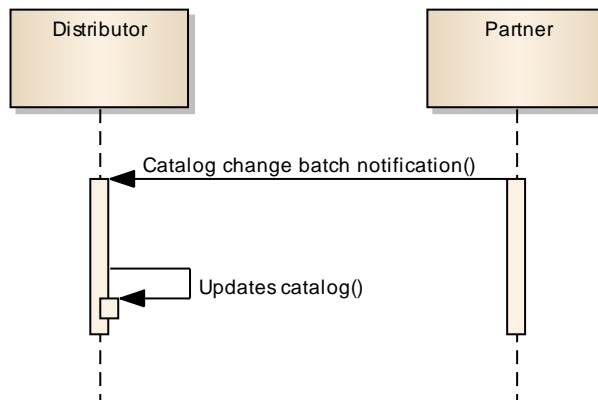

Lifecycle management Use Case

The catalog management API allows the management of the entire lifecycle of the catalog elements.

UC1: A partner updates his catalog. He notifies his distributor the catalog change. The distributor requests a catalog export. Then, he retrieves the catalog at the provided URL.

UC2: A partner updates his catalog. He notifies all catalog changes in detail to his distributor. This one updates his catalog copy.

UC3: A catalog administrator wants to retrieve effective duration of a product offering based on product offering identifier or other search criteria (GET/productOffering).

UC4: A catalog administrator wants to retrieve all the bundled product offerings included in a product offering bundle (GET/productOffering).

UC5: A catalog administrator wants to update the lifecycle status (from Launched to retired for example) of a product offering (PUT or PATCH/productOffering).

Order management Use Case

The catalog management API allows the lookup of the catalog elements during order capture.

UC1: A distributor wants to browse product offerings during order capture and to retrieve product offerings belonging to a given category, for a given channel and a given place. He gets all details on product offerings, product offering prices, product specifications and its characteristics (GET/depth).

UC2: A distributor wants to retrieve the characteristics including prices of a given product offering (GET/productOffering).

UC3: A distributor wants to know if a product offering is available at customer's location (GET/productOffering).

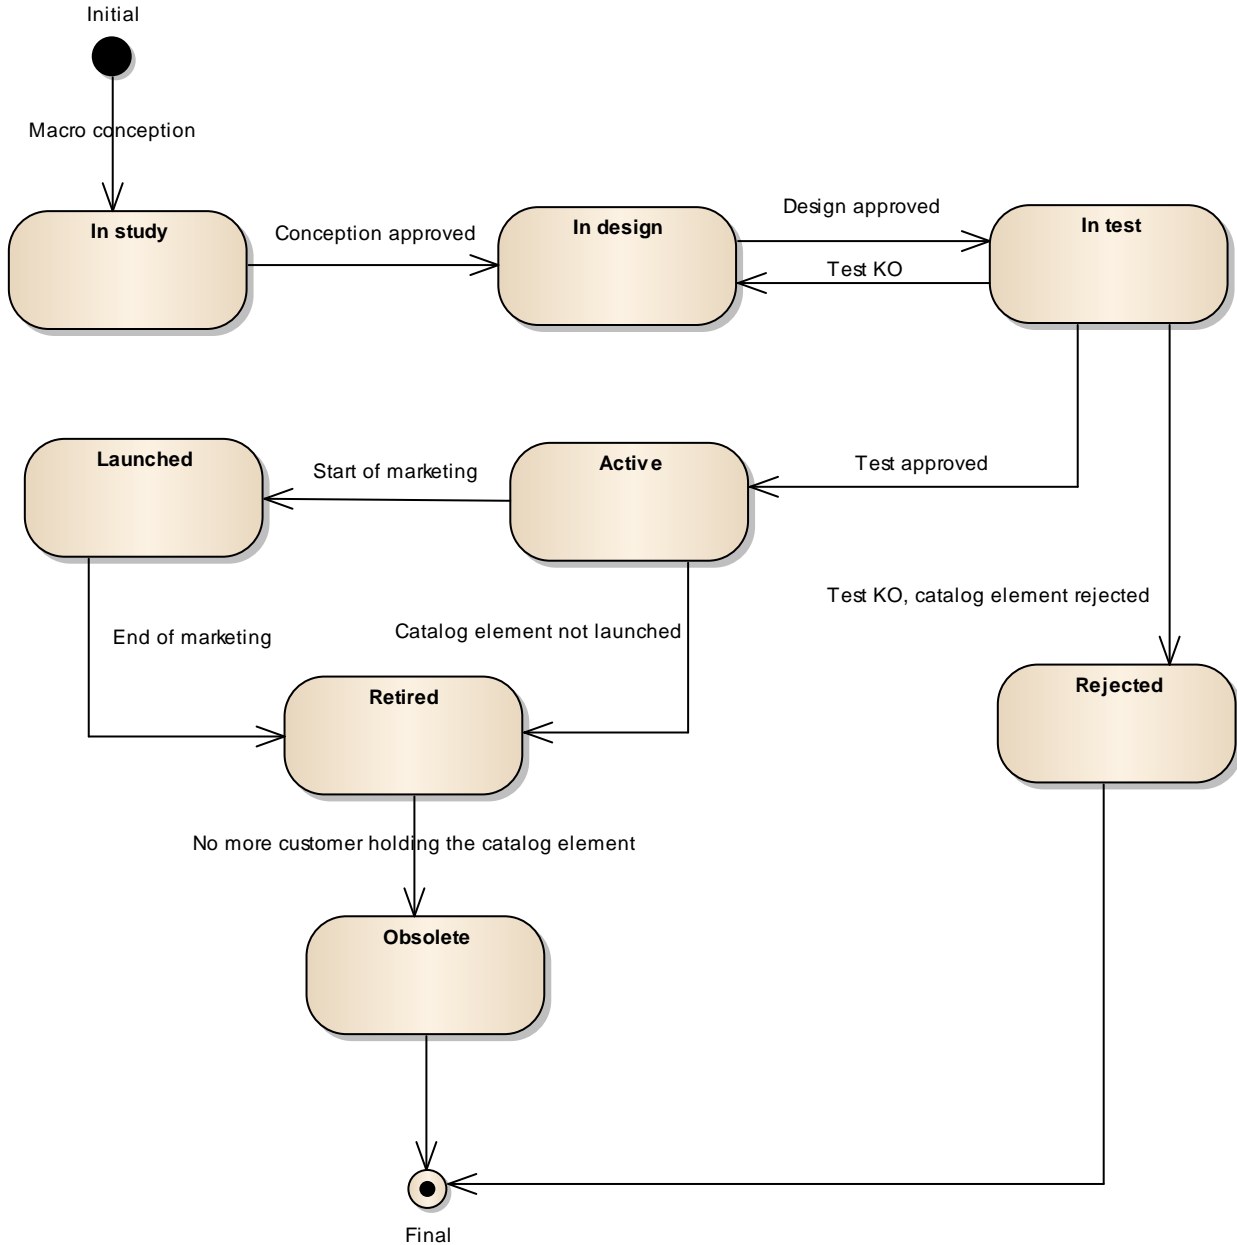

UC4: A distributor wants to know which SLA applies on a given product offering (GET/productOffering).

UC5: A distributor wants to retrieve all product offerings belonging to a partner (GET/productOffering).

RESOURCE MODEL

PRODUCT LIFECYCLE MANAGEMENT STATE MODEL

Product Lifecycle Management (PLM) is responsible for managing the entire lifecycle of the catalog element and its underlying components. This include all of the processes required to design, build, deploy, maintain and ultimately retire the catalog element.

When the macro conception of a catalog element is started the first status of the later is “In Study”.

When the conception of the catalog element is accepted its status is changed to “In Design”.

If the design is approved its status is changed to “In Test”.

Then either the test is OK and then its status is changed to “Active” or the test is KO and its status is changed to “Rejected”. The Rejected status is a final status.

When a catalog element is in an “Active” status it means it has been validated and tested, but it is still not available for customers.

When the beginning of marketing is reached, its status is changed to “Launched”. At this moment customers can buy it.

If the catalog element is not launched, its status is changed to “Retired”.

The same status is achieved when a catalog element reaches the end of marketing.

The “Retired” status means it can not be sold to any new customers, but previous customers can still have it.

When no more customer holds the catalog element, its status is changed to “Obsolete” meaning it can be removed from the catalog.

CATALOG RESOURCE

The root entity for catalog management.

A Product Catalog is a collection of Product Offerings, intended for a specific DistributionChannel, enhanced with additional information such as SLA parameters, invoicing and shipping details. Each Product Offering in a Product Catalog combines pricing and availability information with Product Specifications that describe the relationships between Products, the Services used to realize the Products, and the Resources they require.

Below is a representation of the Catalog resource in JSON format.

```
{
  "id": "10",
  "href": "http://serverlocation:port/catalogManagement/catalog/10",
  "version": "2.0",
  "lastUpdate": "2013-04-19T16:42:23.0Z",
  "type": "Product Catalog",
  "category":
  [
    {
      "id": "12",
      "href": "http://serverlocation:port/catalogManagement/category/12",
      "version": "2.0",
      "name": "Cloud offerings"
    }
  ]
}
```

```

    },
  ],
  "name": "Catalog Wholesale Business",
  "lifecycleStatus": "Active",
  "validFor":
  {
    "startDateTime": "2013-04-19T16:42:23.0Z",
    "endDateTime": "2013-06-19T00:00:00.0Z"
  },
  "relatedParty":
  [
    {
      "id": "1234",
      "href": "http://serverLocation:port/partyManagement/partyRole/1234",
      "role": "Owner"
    },
    {
      "role": "Reviser",
      "name": "Roger Collins"
    }
  ]
}

```

Field Descriptions :

Catalog: Is a collection of Product Offerings, intended for a specific DistributionChannel, enhanced with additional information such as SLA parameters, invoicing and shipping details.

| Field | Description |
|-----------------|--|
| category | Reference to the category |
| href | Reference of the catalog |
| id | Unique identifier of the catalog |
| lastUpdate | Date and time of the last update |
| lifecycleStatus | Used to indicate the current lifecycle status |
| name | Name of the catalog |
| type | Indicates if the catalog is a product, service or resource catalog |
| validFor | The period for which the catalog is valid |
| version | Catalog version |

Category: is used to group product offerings, service and resource candidates in logical containers. Categories can contain other categories and/or product offerings, resource or service candidates.

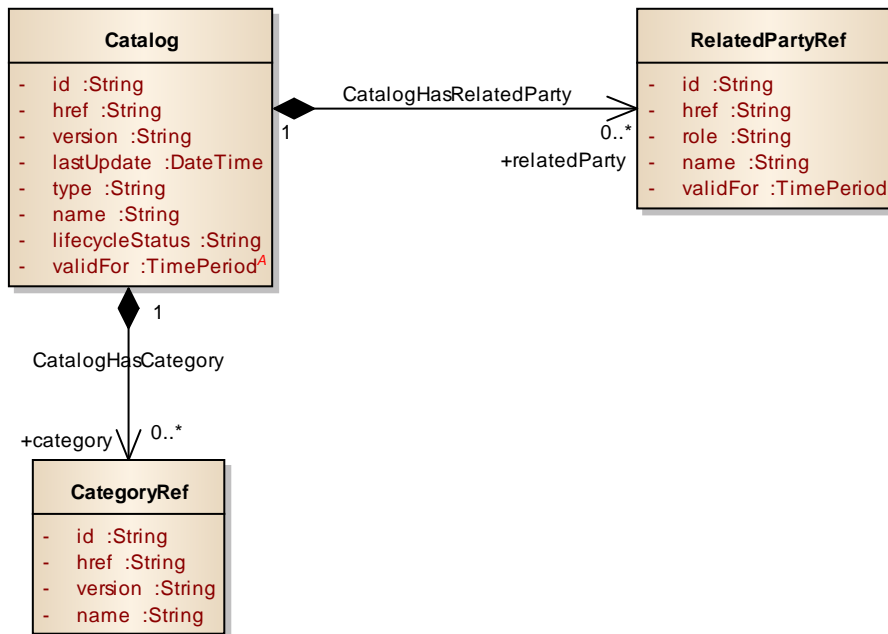

| Field | Description |
|-------------|-----------------------------|
| description | Description of the category |
| href | Reference of the catalog |

| | |
|-----------------|---|
| id | Unique identifier of the category |
| isRoot | If true, this Boolean indicates that the category is a root of categories |
| lastUpdate | Date and time of the last update |
| lifecycleStatus | Used to indicate the current lifecycle status |
| name | Name of the category |
| parentId | Unique identifier of the parent category |
| validFor | The period for which the category is valid |
| version | Category version |

RelatedParty: Defines party or partyRole linked to a specific entity.

| Field | Description |
|----------|--|
| id | Unique identifier of related party |
| href | Reference of the relatedParty, could be a party reference or a partyRole reference |
| name | Name of the related party |
| role | Role of the related party |
| validFor | The period for which the related party is linked to the entity |

UML model:

CATEGORY RESOURCE

The category resource is used to group product offerings, service and resource candidates in logical containers. Categories can contain other categories and/or product offerings, resource or service candidates.

Resource IDs for categories are strings and are defined by the catalog application.

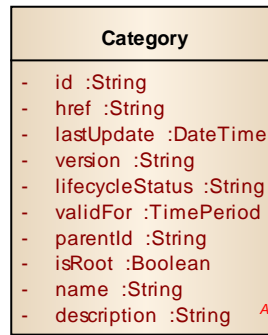

Below is a representation of the Category resource in JSON format.

```
{
  "id": "42",
  "href": "http://serverlocation:port/catalogManagement/category/42",
  "lastUpdate": "2013-04-19T16:42:23.0Z",
  "version": "2.0",
  "lifecycleStatus": "Active",
  "validFor":
  {
    "startDateTime": "2013-04-19T16:42:23.0Z"
  },
  "parentId": "41",
  "isRoot": false,
  "name": "Cloud Services",
  "description": "A category to hold all available cloud service offers"
}
Or for a root category (e.g. no parent)
{
  "id": "42",
  "href": "http://serverlocation:port/catalogManagement/category/42",
  "lastUpdate": "2013-04-19T16:42:23.0Z",
  "version": "2.0",
  "lifecycleStatus": "Active",
  "validFor":
  {
    "startDateTime": "2013-04-19T16:42:23.0Z"
  },
  "parentId": "41",
  "isRoot": true,
  "name": "Cloud Services",
  "description": "A category to hold all available cloud service offers"
}
```

Field Descriptions :

Category: is used to group product offerings, service and resource candidates in logical containers. Categories can contain other categories and/or product offerings, resource or service candidates.

| Field | Description |
|-----------------|---|
| description | Description of the category |
| href | Reference of the catalog |
| id | Unique identifier of the category |
| isRoot | If true, this Boolean indicates that the category is a root of categories |
| lastUpdate | Date and time of the last update |
| lifecycleStatus | Used to indicate the current lifecycle status |
| name | Name of the category |
| parentId | Unique identifier of the parent category |
| validFor | The period for which the category is valid |
| version | Category version |

UML model:

PRODUCT OFFERING RESOURCE

The Product Offering resource represents entities that are orderable from the provider of the catalog, this resource includes pricing information.

Note: isBundle determines whether a productOffering represents a single productOffering (false), or a bundle of productOfferings (true).

If false, then a productSpecification will be returned, but the bundledProductOfferings will be absent or empty and vice-versa if isBundle is true.

Below is a representation of the ProductOffering resource in JSON format.

```
{
  "id": "42",
  "href": "http://serverlocation:port/productCatalogManagement/productOffering/42",
  "version": "2.0",
  "lastUpdate": "2013-04-19T16:42:23.0Z",
  "name": "Virtual Storage Medium",
  "description": "Virtual Storage Medium",
  "isBundle": true,
  "lifecycleStatus": "Active",
  "validFor":
  {
    "startDateTime": "2013-04-19T16:42:23.0Z",
    "endDateTime": "2013-06-19T00:00:00.0Z"
  },
  "category":
  [
    {
      "id": "12",
      "href": "http://serverlocation:port/catalogManagement/category/12",
      "version": "2.0",
      "name": "Cloud offerings"
    }
  ]
}
```

```
    },
  ],
  "channel":
  [
    {
      "id": "13",
      "href": "http://serverlocation:port/marketSales/channel/13",
      "name": "Online Channel"
    }
  ],
  "place":

Field Descriptions :

BundledProductOffering: A type of ProductOffering that belongs to a grouping of ProductOfferings made available to the market. It inherits of all attributes of ProductOffering.

Category: is used to group product offerings, service and resource candidates in logical containers. Categories can contain other categories and/or product offerings, resource or service candidates.

| Field | Description |
|-----------------|---|
| description | Description of the category |
| href | Reference of the catalog |
| id | Unique identifier of the category |
| isRoot | If true, this Boolean indicates that the category is a root of categories |
| lastUpdate | Date and time of the last update |
| lifecycleStatus | Used to indicate the current lifecycle status |
| name | Name of the category |
| parentId | Unique identifier of the parent category |
| validFor | The period for which the category is valid |
| version | Category version |

Channel: Defines the channel for selling product offerings.

| Field | Description |
|-------|----------------------------------|
| href | Reference of the channel |
| id | Unique identifier of the channel |
| name | Name of the channel |

Place: Defines the places where the product offerings are sold.

| Field | Description |
|-------|--------------------------------|
| href | Reference of the place |
| id | Unique identifier of the place |
| name | Name of the place |

Price: Provides all amounts (tax included, duty free, tax rate), used currency and percentage to apply for ProdOfferPriceAlteration.

| Field | Description |
|-------------------|---|
| currencyCode | A string used as a code for specifying the currency associated to the given amounts. The ISO4217 norm uses 3 letters to define the currency (for example USD for US dollar or EUR for Euro) |
| dutyFreeAmount | All taxes excluded amount (expressed in the given currency) |
| percentage | Percentage to apply for ProdOfferPriceAlteration |
| taxIncludedAmount | All taxes included amount (expressed in the given currency) |
| priceType | Indicates the price type: recurring, one time, usage |
| taxRate | Tax rate |

ProductOffering: Represents entities that are orderable from the provider of the catalog, this resource includes pricing information.

| Field | Description |
|-------------|------------------------------------|
| description | Description of the productOffering |

| | |
|-----------------|--|
| href | Reference of the ProductOffering |
| id | Unique identifier of the productOffering |
| isBundle | isBundle determines whether a productOffering represents a single productOffering (false), or a bundle of productOfferings (true). |
| lastUpdate | Date and time of the last update |
| lifecycleStatus | Used to indicate the current lifecycle status |
| name | Name of the productOffering |
| validFor | The period for which the productOffering is valid |
| version | ProductOffering version |

ProductOfferPriceAlteration: An amount, usually of money, that modifies a price charged for a productOffering.

| Field | Description |
|-----------------------|---|
| applicationDuration | Duration during which the prodOfferPriceAlteration applies on the productOffering (for instance 2 months free of charge for the recurring charge) |
| description | Description of the prodOfferPriceAlteration |
| href | Reference of the prodOfferPriceAlteration |
| id | Unique identifier of the prodOfferPriceAlteration e |
| name | Name of the prodOfferPriceAlteration |
| priceCondition | Condition that triggers the price application |
| priceType | Indicates the price type: recurring, one time, usage |
| recurringChargePeriod | Could be month, week... |
| unitOfMeasure | Could be minutes, GB... |
| validFor | The period for which the prodOfferPriceAlteration is valid |

ProductOfferingPrice: Is based on both the basic cost to develop and produce products and the enterprise's policy on revenue targets. This price may be further revised through discounting (prodOfferPriceAlteration). The price, applied for a productOffering may also be influenced by the productOfferingTerm, the customer selected – e.g. a productOffering can be offered with multiple terms, like commitment periods for the contract. The price may be influenced by this productOfferingTerm. A productOffering may be cheaper with a 24 month commitment than with a 12 month commitment.

| Field | Description |
|-----------------------|--|
| description | Description of the productOfferingPrice |
| name | Name of the productOfferingPrice |
| priceType | Indicates the price type: recurring, one time, usage |
| recurringChargePeriod | Could be month, week... |
| unitOfMeasure | Could be minutes, GB... |
| validFor | The period for which the productOfferingPrice is valid |
| version | ProductOffering version |

ProductOfferingTerm: A condition under which a ProductOffering is made available to Customers. For instance, a productOffering can be offered with multiple commitment periods.

| Field | Description |
|-------------|--|
| description | Description of the productOfferingTerm |

| | |
|----------|---|
| duration | Duration of the productOfferingTerm |
| name | Name of the productOfferingTerm |
| validFor | The period for which the productOfferingterm is valid |

ProductSpecification: A detailed description of a tangible or intangible object made available externally in the form of a ProductOffering to customers or other parties playing a party role.

| Field | Description |
|-----------------|--|
| brand | The manufacturer or trademark of the specification |
| description | A narrative that explains in detail what the product specification is |
| href | Reference of the product specification |
| id | Unique identifier of the product specification |
| isBundle | isBundle determines whether a productSpecification represents a single productSpecification (false), or a bundle of productSpecification (true). |
| lastUpdate | Date and time of the last update |
| lifecycleStatus | Used to indicate the current lifecycle status |
| name | Name of the product specification |
| productNumber | An identification number assigned to uniquely identify the specification |
| validFor | The period for which the product specification is valid |
| version | Product specification version |

ServiceCandidate: Is an entity that makes a ServiceSpecification available to a catalog. A ServiceCandidate and its associated ServiceSpecification may be published - made visible - in any number of ServiceCatalogs, or in none. One ServiceSpecification can be composed of other ServiceSpecifications. The Service Candidate consists of a subset of ServiceSpecification characteristics to fulfill a product offering. These ServiceSpecifications may also be published.

| Field | Description |
|-----------------|---|
| description | A narrative that explains in detail what the service candidate is |
| href | Reference of the service candidate |
| id | Unique identifier of the service candidate |
| lastUpdate | Date and time of the last update |
| lifecycleStatus | Used to indicate the current lifecycle status |
| name | Name of the service candidate |
| validFor | The period for which the service candidate is valid |
| version | Service candidate version |

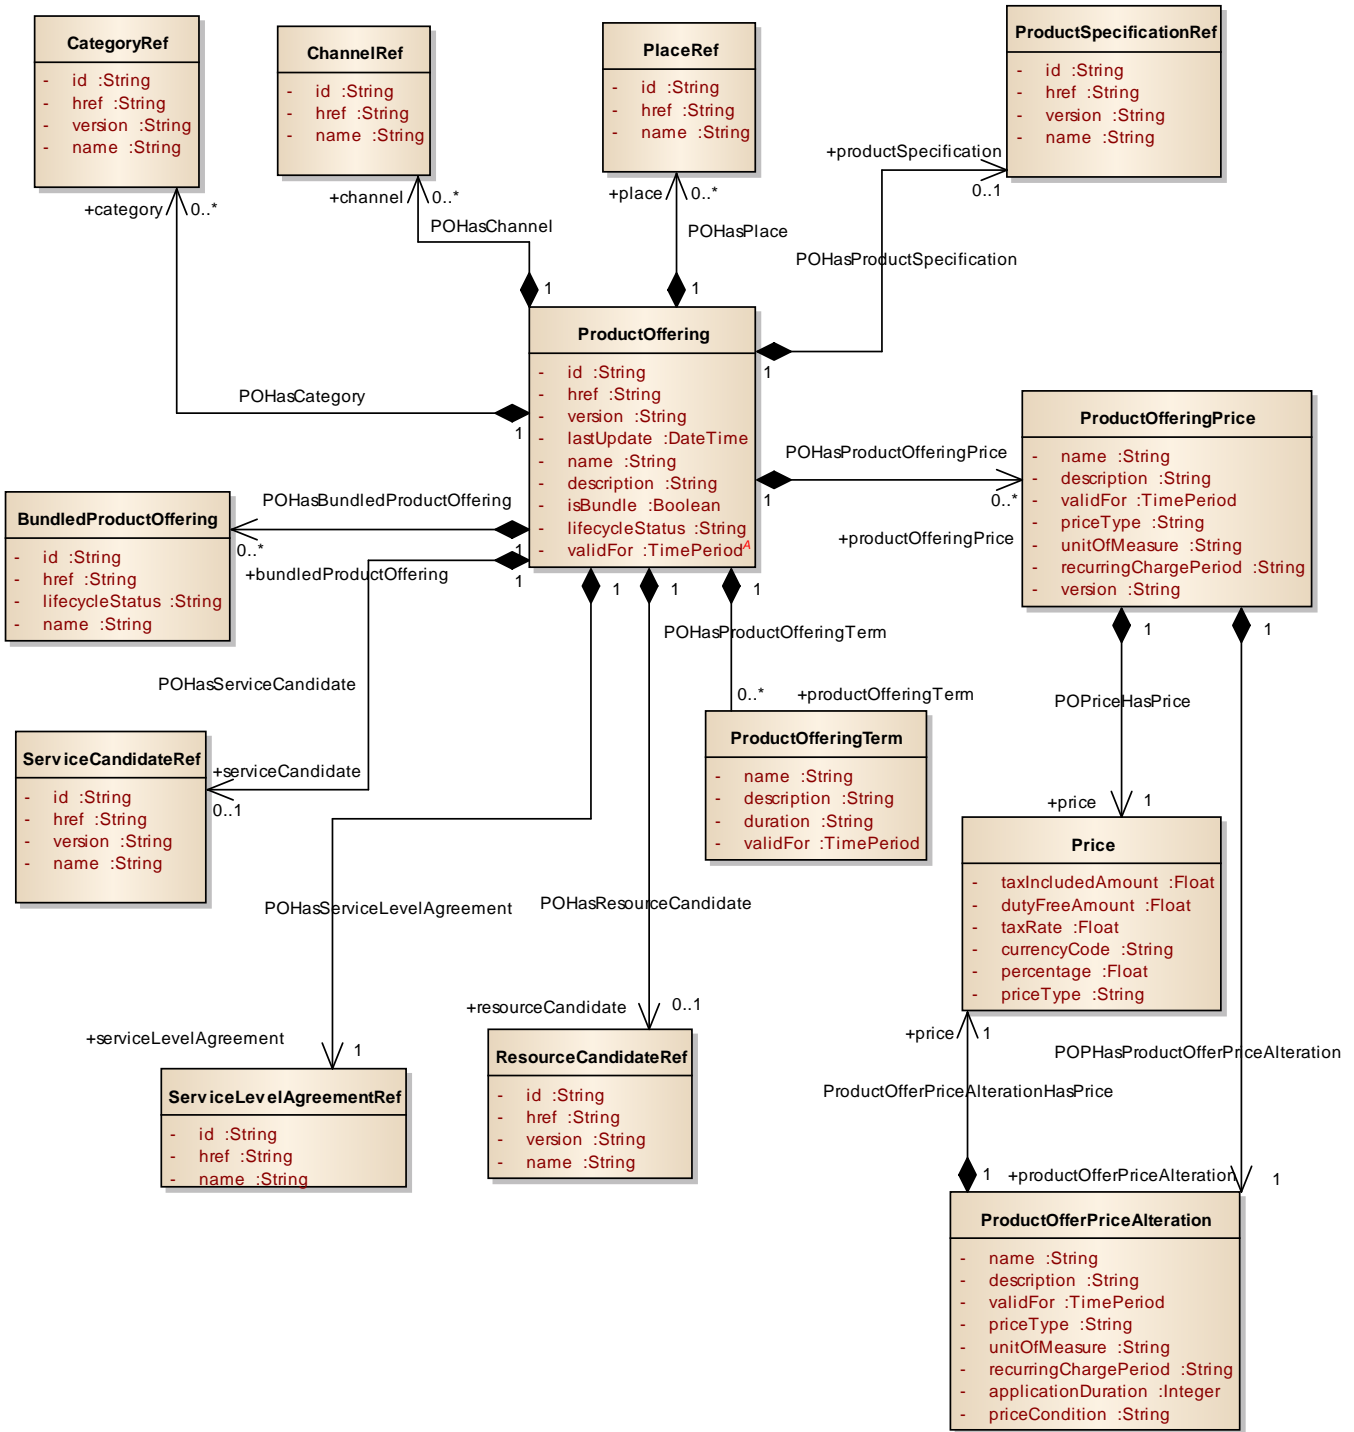

ServiceLevelAgreement: A service level agreement (SLA) is a type of agreement that represents a formal negotiated agreement between two parties designed to create a common understanding about products, services, priorities, responsibilities, and so forth. The SLA is a set of appropriate procedures and targets formally or informally agreed between parties in order to achieve and maintain specified Quality of Service.

| Field | Description |
|-------|--|
| href | Reference of the service level agreement |
| id | Unique identifier of the service level agreement |
| name | Name of the service level agreement |

ResourceCandidate: Is an entity that makes a ResourceSpecification available to a catalog. A ResourceCandidate and its associated ResourceSpecification may be published - made visible - in any number of ResourceCatalogs, or in none. One ResourceSpecification can be composed of other ResourceSpecifications. The ResourceCandidate consists of a subset of ResourceSpecification characteristics to fulfill a product offering. These ResourceSpecifications may also be published.

| Field | Description |
|-------|---|
| href | Reference of the resource candidate |
| id | Unique identifier of the resource candidate |
| name | Name of the resource candidate |

UML model:

PRODUCT SPECIFICATION RESOURCE

The ProductSpecification Resource is a detailed description of a tangible or intangible object made available externally in the form of a ProductOffering to customers or other parties playing a party role.

Below is a representation of the ProductSpecification resource in JSON format.

Field Descriptions :

Attachment: describes a product through video, pictures...

| Field | Description |
|-------|---|
| href | Reference of the attachment |
| id | Unique identifier of the attachment |
| type | Attachment type such as video, picture |
| url | Uniform Resource Locator, is a web page address (a subset of URI) |

BundledProductSpecification: A type of ProductSpecification that belongs to a grouping of ProductSpecifications made available to the market. It inherits of all attributes of ProductSpecification.

ProductSpecification: is a detailed description of a tangible or intangible object made available externally in the form of a ProductOffering to customers or other parties playing a party role.

| Field | Description |
|-----------------|--|
| brand | The manufacturer or trademark of the specification |
| description | A narrative that explains in detail what the product specification is |
| href | Reference of the product specification |
| id | Unique identifier of the product specification |
| isBundle | isBundle determines whether a productSpecification represents a single productSpecification (false), or a bundle of productSpecification (true). |
| lastUpdate | Date and time of the last update |
| lifecycleStatus | Used to indicate the current lifecycle status |
| name | Name of the product specification |
| productNumber | An identification number assigned to uniquely identify the specification |
| validFor | The period for which the product specification is valid |
| version | Product specification version |

ProductSpecCharacteristic: A characteristic quality or distinctive feature of a ProductSpecification. The characteristic can be take on a discrete value, such as color, can take on a range of values, (for example, sensitivity of 100-240 mV), or can be derived from a formula (for example, usage time (hrs) = 30 – talk time *3). Certain characteristics, such as color, may be configured during the ordering or some other process.

| Field | Description |
|--------------|---|
| configurable | If true, the Boolean indicates that the productSpecCharacteristic is configurable |

| | |
|-------------|---|
| description | A narrative that explains in detail what the productSpecCharacteristic is |
| name | Name of the productSpecCharacteristic |
| valueType | A kind of value that the characteristic can take on, such as numeric, text and so forth |
| validFor | The period for which the productSpecCharacteristic is valid |

ProductSpecCharacteristicValue: A number or text that can be assigned to a ProductSpecCharacteristic.

| Field | Description |
|---------------|--|
| default | Indicates if the value is the default value for a characteristic |
| unitOfMeasure | Could be minutes, GB... |
| validFor | The period of time for which a value is applicable |
| value | A discrete value that the characteristic can take on |
| valueFrom | The low range value that a characteristic can take on |
| valueTo | The upper range value that a characteristic can take on |
| valueType | A kind of value that the characteristic can take on, such as numeric, text, and so forth |

ProductSpecificationRelationship: A migration, substitution, dependency or exclusivity relationship between/among product specifications.

| Field | Description |
|----------|---|
| href | Reference of the productSpecification |
| validFor | The period for which the productSpecificationRelationship is valid |
| type | Type of relationship such as migration, substitution, dependency, exclusivity |
| id | Unique identifier of the productSpecification |

RelatedParty: Defines party or partyRole linked to a specific entity.

| Field | Description |
|----------|--|
| id | Unique identifier of related party |
| href | Reference of the relatedParty, could be a party reference or a partyRole reference |
| name | Name of the related party |
| role | Role of the related party |
| validFor | The period for which the related party is linked to the entity |

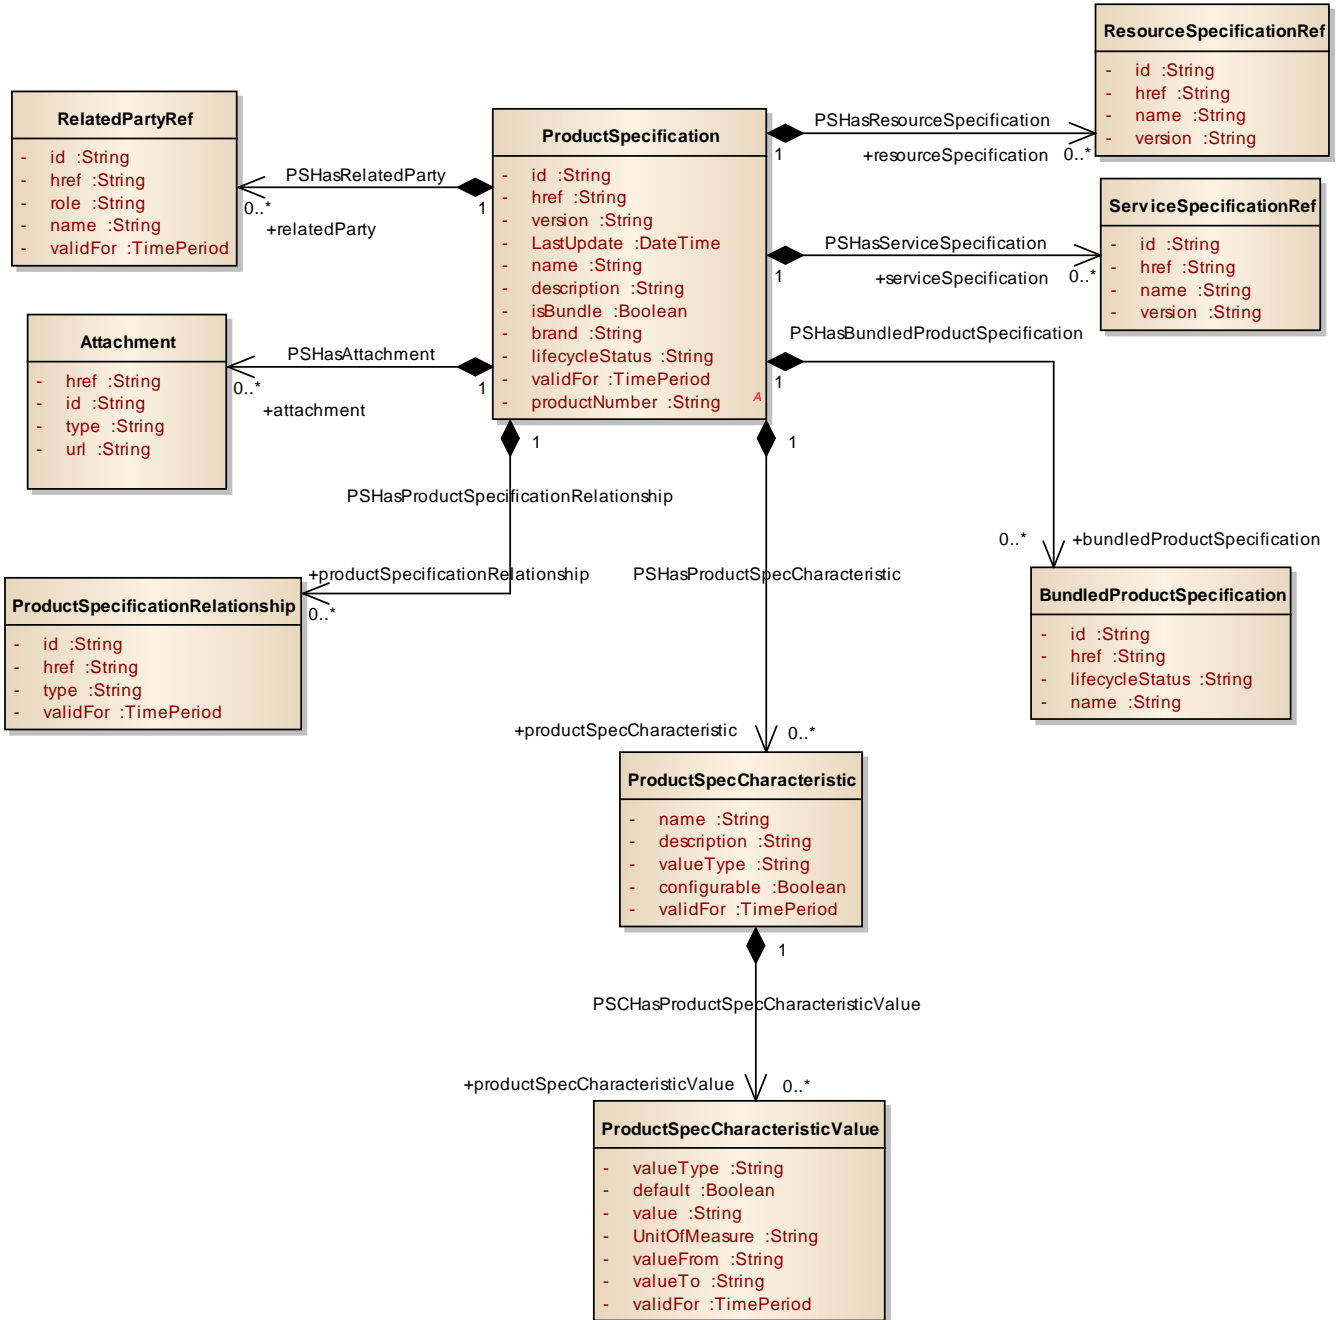

ResourceSpecification: ResourceSpecification(s) required to realize a ProductSpecification.

| Field | Description |
|---------|---|
| href | Reference of the resource specification |
| id | Unique identifier of the resource specification |
| name | Name of the requiredResourceSpecification |
| version | Resource specification version |

ServiceSpecification: ServiceSpecification(s) required to realize a ProductSpecification.

| Field | Description |
|---------|--|
| href | Reference of the serviceSpecification |
| id | Unique identifier of the service specification |
| name | Name of the requiredServiceSpecification |
| version | Service specification version |

UML model:

Export Job Resource

An ExportJob resource represents a TASK used to export resources to a File

The ExportJob resource supports the following properties:

| Attribute name | Description |
|----------------|---|
| query | Used to scope the exported data (identical to GET filter construct using target ID as base) "query": "type=productOffering&version=2.0" |
| path | URL of the root resource acting as the source for streaming content to the file specified by the ExportJob ../partyManagement/individual |
| content-type | The format of the exported data .By default "application/json" |
| status | notstarted, running, succeeded, failed |
| url | URL of the File containing the data to be exported a file URL, which is of the form file://host/path where host is the fully qualified domain name of the system on which the path is accessible, and path is a hierarchical directory path of the form directory/directory/.../name |
| completionDate | Date at which the Job was completed. |
| creationDate | Date at which the Job was created. |
| errorLog | Reason for Failure |

JSON representation of an ExportJob

```
{
```

```

    "id": "54",
    "href": "http://api/catalogManagement/exportJob/54",
    "status": "running",
    "path": "partyManagement/",
    "content-type": "application/json",
    "errorLog": "",
    "creationDate": "2013-04-19T16:42:23-04:00",
    "completionDate": "2013-04-21T16:42:23-04:00",
    "url": "ftp://ftp.myCatalog.com/party/54"
  }

```

UML Model:

Import Job Resource

An ImportJob resource represent a TASK used to import resources from a File

The ImportJob resource supports the following properties:

| Attribute name | Description |
|----------------|--|
| content-type | The format of the imported data. By default "application/json" |
| path | URL of the root resource where the content of the file specified by the ImportJob must be applied ../partyManagement/individual |

| | |
|----------------|--|
| status | notstarted, running, succeeded, failed |
| url | <p>URL of the File containing the data to be imported</p> <p>a file URL, which is of the form</p> <p>file://host/path</p> <p>where host is the fully qualified domain name of the system on which the path is accessible, and path is a hierarchical directory path of the form directory/directory/.../name</p> |
| completionDate | Date at which the Job was completed. |
| creationDate | Date at which the Job was created. |
| errorLog | Reason for Failure if status is failed |

JSON representation of an ImportJob

```
{
  "id": "54",
  "href": "http://api/catalogManagement/importJob/54",
  "status": "completed",
  "path": "catalogManagement/",
  "content-type": "application/json",
  "errorLog": "",
  "creationDate": "2013-04-19T16:42:23-04:00",
  "completionDate": "2013-04-21T16:42:23-04:00",
  "url": "ftp://ftp.myCatalog.com/party/54"
}
```

UML Model:

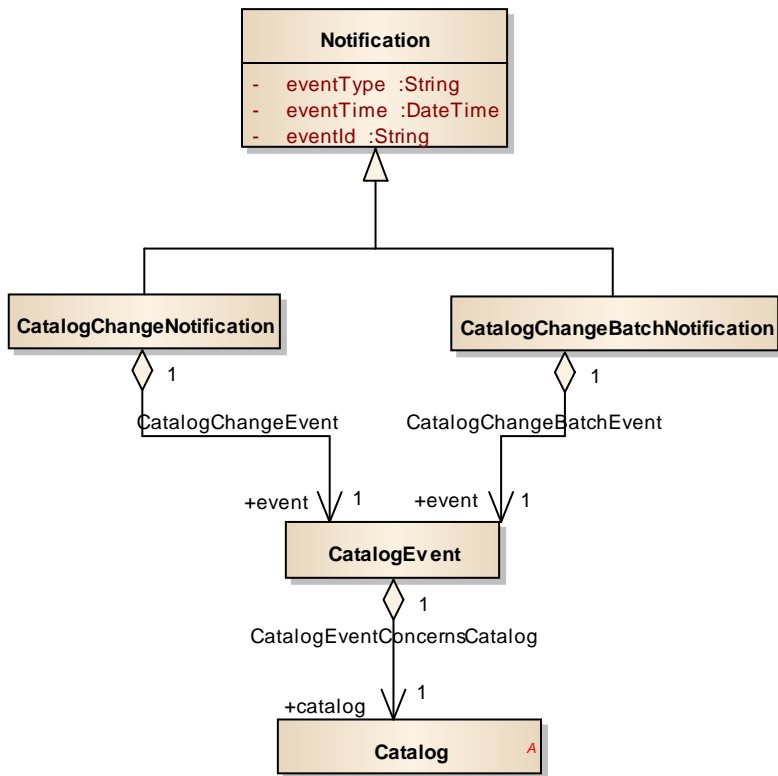

| ImportJob |
|--|
| - id :String - href :String - contentType :String - path :String - status :String - url :String - completionDate :DateTime - creationDate :DateTime - errorLog :String |

Notification Resource Models

Two notification event types are defined:

1. CatalogChangeNotification
2. CatalogChangeBatchNotification

Catalog Notification UML Diagram:

Catalog change notification: notifies that a catalog has been updated.

```

{
  "event": {
    "id": "01",
    "dateTime": "2013-04-19T16:42:25-30:00",
    "eventType": "Catalog change notification",
    "catalog": [
      {
        "id": "10",
        "href": "http://serverlocation:port/catalogManagement/catalog/10",
        "version": "2.0",
        "lastUpdate": "2013-04-19T16:42:23-04:00",
      }
    ]
  }
}
    
```

```

        "type": "Product Catalog",
        "name": "Catalog Wholesale Business"
    }
]
}
}

```

Catalog change batch notification: notifies in detail all catalog updates.

```

{
  "event": {
    "id": "01",
    "dateTime": "2013-04-19T16:42:25-30:00",
    "eventType": "Catalog change batch notification",
    "catalog": [
      {
        "id": "10",
        "href": "http://serverlocation:port/catalogManagement/catalog/10",
        "version": "2.0",
        "lastUpdate": "2013-04-19T16:42:23-04:00",
        "type": "Product Catalog",
        "name": "Catalog Wholesale Business",
        "update": [
          {
            "op": "add",
            "path": "/category",
            "value": {
              "id": "42",
              "href": "http://serverlocation:port/catalogManagement/category/42",
              "lastUpdate": "2013-04-19T16:42:23-04:00",
              "version": "2.0",
              "lifecycleStatus": "Active",
              "validFor": {
                "startDateTime": "2013-04-19T16:42:23-04:00",
                "endDateTime": ""
              },
              "parentId": "",
              "isRoot": "true",
              "name": "Home, Audio/Entertainment",
              "description": "A category to hold all inside offers"
            }
          }
        ]
      }
    ]
  }
}

```

```

        "op": "add",
        "path": "/category",
        "value": {
            "id": "421",
            "href": "http://serverlocation:port/catalogManagement/catalog/421",
            "lastUpdate": "2013-04-19T16:42:23-04:00",
            "version": "2.0",
            "lifecycleStatus": "Active",
            "validFor": {
                "startDateTime": "2013-04-
19T16:42:23-04:00",
                "endDateTime": ""
            },
            "parentId": "42",
            "isRoot": "false",
            "name": "Wireless sensors",
            "description": "A category to hold all wireless
sensor offers"
        }
    }, {
        "op": "add",
        "path": "/productSpecification",
        "value": {
            "id": "14",
            "href":
"http://serverlocation:port/catalogManagement/productSpecification/14",
            "version": "2.0",

    "url": "ftp://ftp.mycatalog.com/catalogManagement/54.json"  
  }  
}  
}
```

API OPERATION TEMPLATES

For every single of operation on the entities use the following templates and provide sample REST requests and responses.

Remember that the following Uniform Contract rules must be used :

| Operation on Entities | Uniform API Operation | Description |
|--------------------------------|-----------------------|---|
| Query Entities | GET Resource | GET must be used to retrieve a representation of a resource. |
| Create Entity | POST Resource | POST must be used to create a new resource |
| Partial Update of an Entity | PATCH Resource | PATCH must be used to partially update a resource |
| Complete Update of an Entity | PUT Resource | PUT must be used to completely update a resource identified by its resource URI |
| Remove an Entity | DELETE Resource | DELETE must be used to remove a resource |
| Execute an Action on an Entity | POST on TASK Resource | POST must be used to execute Task Resources |
| Other Request Methods | POST on TASK Resource | GET and POST must not be used to tunnel other request methods. |

Filtering and attribute selection rules are described in the TMF REST Design Guidelines.

Notifications are also described in a subsequent section.

GET /catalogManagement/category

This Uniform Contract operation is used to retrieve the representation of a managed entity or a task.

Note that collections can be retrieved via GET /API/<RESOURCE> with no {ID}

Description :

- This operation retrieves productCategory from a catalog. The category resource is used to group product offerings, service and resource candidates in logical containers. Categories can contain other categories and/or product offerings, resource or service candidates.
- The resource represents a managed entity or a collection depending on the query pattern.
- The identifier is a string that can consist of numbers, not necessarily alphanumeric.

Behavior :

- Standard behavior and response codes for GET operations
- Filtering is enabled on all attributes, particularly due to the hierarchical nature of productCategory, children of a productCategory are obtained by filtering on the parentId attribute of the resource.
- Attribute selection is not enabled for this simple resource

REQUEST

```
GET /catalogManagement/category/{42}
Accept: application/json
```

RESPONSE

```
200
Content-Type: application/json
```

```
{
  "id": "42",
  "href": "http://serverlocation:port/catalogManagement/category/42",
  "lastUpdate": "2013-04-19T16:42:23-04:00",
  "version": "2.0",
  "lifecycleStatus": "Active",
  "validFor": {
    "startDateTime": "2013-04-19T16:42:23-04:00",
    "endDateTime": ""
  },
  "parentId": "41",
  "isRoot": "false",
  "name": "Cloud Services",
```

```
"description": "A category to hold all available cloud service offers"
}
```

GET /catalogManagement/productOffering/{ID}

This Uniform Contract operation is used to retrieve the representation of a managed entity or a task.

Note that collections can be retrieved via GET /API/<RESOURCE> with no {ID}

Description :

- This operation returns all productOfferings from the catalog, unless an ID is specified in which case a specific productOffering resource would be returned. The ProductOffering resource represents entities that are orderable from the provider of the catalog. This resource includes pricing information.
- The resource instance being returned is a productOffering or an array of product offering if the query returns multiple resources
- The resource is either a managed entity or a collection depending on the query pattern.
- The ID may be a string (or a string containing numbers).

Behavior :

- What status and exception codes are returned.
 - 200 if no productOffering found for supplied categoryId (200) (filter expression)
 - 404 Not found when the supplied ID doesn't match a known productOffering.
- Filtering is enabled on all productOffering attributes.
- Attribute selection is enabled.

REQUEST

GET /catalogManagement/productSpecification/{ID}

This Uniform Contract operation is used to retrieve the representation of a managed entity or collection.

Note that collections can be retrieved via GET /API/<RESOURCE> with no {ID}

Description :

- This operation returns productSpecifications from a catalog. A detailed description of a tangible or intangible object made available externally in the form of a ProductOffering to Customers or other Parties playing a PartyRole.
- The resource instance being returned is a productSpecification or an array of productSpecifications if the query returns multiple specifications.
- The resource represents a managed entity or a collection.
- The ID may be a string (or a string containing numbers).

Behavior :

- What status and exception codes are returned.
 - 200 if no productSpecification found
 - 404 Not found when the supplied ID doesn't match a known productSpecification.
- Filtering is enabled on all productSpecification attributes.
- Attribute selection is enabled.

REQUEST

```

PUT /catalogManagement/category/{ID}

This Uniform Contract operation is used to completely update the representation of a managed entity or a task.

Description :

- This operation completely updates a category.
- The resource represents a managed entity.
- The ID may be a string (or a string containing numbers).

Behavior :

- What status and exception codes are returned.
- Returns HTTP/1.1 status code 201 if the request was successful.
- Any other special return and/or exception codes.

REQUEST

PUT /catalogManagement/category/42
Content-type: application/json

PATCH /catalogManagement/category/{ID}

This Uniform Contract operation is used to partially update the representation of a managed entity or a task.

Description :

- This operation partially updates a category.
- The resource represents a managed entity.
- The ID may be a string (or a string containing numbers).

Behavior :

- What status and exception codes are returned.
- Returns HTTP/1.1 status code 201 if the request was successful.
- Any other special return and/or exception codes.

Specify which attributes are patchable using the following table (to capture RO attributes)

| Attribute name | Patchable | Rule |
|-----------------|-----------|---|
| Id | No | |
| lastUpdate | No | |
| version | Y | Should be greater than the current one |
| lifecycleStatus | Y | Status should be valid |
| startDateTime | Y | |
| endDateTime | Y | Should be greater than startDateTime |
| parentId | Y | The parent category should exist |
| isRoot | Y | To be updated in compliance with the parentId |
| name | Y | |
| description | Y | |

Further document any rules that must be implemented when patching attributes.

| Rule name | Rule/Pre Condition/Side Effects/Post Conditions |
|-----------|--|
| Root | <p>When isRoot is patched to false, parentId should indicate the parent category.</p> <p>When isRoot is patched to true, parentId should be empty.</p> |

| REQUEST |

| <p>PATCH /catalogManagement/category/{42} Content-type: application/json</p> <pre data-bbox="71 965 375 1093"> { "parentId": "", "isRoot": "true" } </pre> |
| RESPONSE |
| <p>201 Content-Type: application/json</p> <pre data-bbox="71 1317 1050 1861"> { "id": "42", "href": "http://serverlocation:port/catalogManagement/category/42", "lastUpdate": "2013-04-19T16:42:23-04:00", "version": "2.0", "lifecycleStatus": "Active", "validFor": { "startDateTime": "2013-04-19T16:42:23-04:00", "endDateTime": "" }, "parentId": "", "isRoot": "true", "name": "Cloud Services", "description": "A category to hold all available cloud service offers" } </pre> |

PATCH /catalogManagement/productOffering/{ID}

This Uniform Contract operation is used to partially update the representation of a managed entity or a task.

Description :

- This operation partially updates a productOffering.
- The resource represents a managed entity.
- The ID may be a string (or a string containing numbers).

Behavior :

- What status and exception codes are returned.
- Returns HTTP/1.1 status code 201 if the request was successful.
- Any other special return and/or exception codes.

Specify which attributes are patchable using the following table (to capture RO attributes)

| Attribute name | Patchable | Rule |
|-----------------|-----------|---|
| Id | No | |
| lastUpdate | No | |
| version | Y | Should be greater than the current one |
| lifecycleStatus | Y | Status should be valid |
| startDateTime | Y | |
| endDateTime | Y | Should be greater than startDateTime |
| isBundle | Y | To be updated in compliance with the bundledProductOffering |
| name | Y | |
| description | Y | |

| | | |
|------------------------|---|---|
| category | Y | |
| bundledProductOffering | Y | To be updated in compliance with isBundle |
| productSpecification | Y | It should exist |
| serviceCandidate | Y | It should exist |
| resourceCandidate | Y | It should exist |
| channel | Y | It should exist |
| place | Y | It should exist |
| productOfferingTerm | Y | |
| productOfferingPrice | Y | It should exist |

Further document any rules that must be implemented when patching attributes.

| Rule name | Rule/Pre Condition/Side Effects/Post Conditons |
|-----------|--|
| isBundle | <p>isBundle determines whether a productOffering represents a single productOffering (false), or a bundle of productOfferings (true).</p> <p>If false, then a productOffering will be returned, but the bundledProductOffering will be absent or empty and vice-versa if isBundle is true.</p> |

PATCH /catalogManagement/productSpecification/{ID}

This Uniform Contract operation is used to partially update the representation of a managed entity or a task.

Description :

- This operation partially updates a productSpecification.
- The resource represents a managed entity.
- The ID may be a string (or a string containing numbers).

Behavior :

- What status and exception codes are returned.
- Returns HTTP/1.1 status code 201 if the request was successful.
- Any other special return and/or exception codes.

Specify which attributes are patchable using the following table (to capture RO attributes)

| Attribute name | Patchable | Rule |
|-----------------|-----------|--|
| Id | No | |
| lastUpdate | No | |
| version | Y | Should be greater than the current one |
| lifecycleStatus | Y | Status should be valid |
| startDateTime | Y | |
| endDateTime | Y | Should be greater than startDateTime |
| isBundle | Y | To be updated in compliance with the bundledProductSpecification |
| name | Y | |
| description | Y | |

| | | |
|----------------------------------|---|---|
| brand | Y | |
| relatedParty | Y | It should exist |
| attachment | Y | It should exist |
| bundledProductSpecification | Y | To be updated in compliance with isBundle |
| productSpecificationRelationship | Y | It should exist |
| serviceSpecification | Y | It should exist |
| resourceSpecification | Y | It should exist |
| productSpecCharacteristic | Y | It should exist |
| productSpecCharacteristicValue | Y | |

Further document any rules that must be implemented when patching attributes.

| Rule name | Rule/Pre Condition/Side Effects/Post Conditons |
|-----------|---|
| isBundle | <p>isBundle determines whether a productSpecification represents a single productSpecification (false), or a bundle of productSpecification (true).</p> <p>If false, then a productSpecification will be returned, but the bundledProductSpeciciation will be absent or empty and vice-versa if isBundle is true.</p> |

REQUEST

PATCH /catalogManagement/productSpecification/{22}
 Content-type: application/json-patch+json

```
{
  "op": "add",
  "path": "/attachment",
  "value": {

POST /catalogManagement/category

This Uniform Contract operation is used to create a managed entity or a task.

Description :

- This operation creates a category
- The resource represents a managed entity.
- The ID may be a string (or a string containing numbers).

Behavior :

- Standard POST behavior.
- Returns HTTP/1.1 status code 201 if the request was successful.
- Any other special return and/or exception codes.

ID Management :

The response provide the category id.

Specify the attributes required when an entity is created (and their default values if not):

| Attribute name | Mandatory | Default | Rule |
|----------------|-----------|---------|------|
| isRoot | N | true | |

| | | | |
|----------|---|--|--|
| name | Y | | |
| parentId | Y | | If isRoot is set to "false", parentId is mandatory |

- Further specify any rules on the creation of the entity

| Rule name | Rule |
|-----------|------|
| | |

| |
|--|

POST /catalogManagement/productOffering

This Uniform Contract operation is used to create a managed entity or a task.

Description :

- This operation creates a productOffering
- The resource represents a managed entity.
- The ID may be a string (or a string containing numbers).

Behavior :

- Standard POST behavior.
- Returns HTTP/1.1 status code 201 if the request was successful.
- Any other special return and/or exception codes.

ID Management :

The response provides the productOffering id.

Specify the attributes required when an entity is created (and their default values if not):

| Attribute name | Mandatory | Default | Rule |
|------------------------|-----------|---------|---|
| name | Y | | |
| isBundle | N | false | |
| bundledProductOffering | Y | | If isBundle is set to "true", bundledProductOffering is mandatory |

| | | | |
|----------------------|---|--|--|
| productSpecification | Y | | |
| productOfferingPrice | Y | | |

- Further specify any rules on the creation of the entity

| Rule name | Rule |
|-----------|------|
| | |

POST /catalogManagement/productSpecification

This Uniform Contract operation is used to create a managed entity or a task.

Description :

- This operation creates a productSpecification.
- The resource represents a managed entity.
- The ID may be a string (or a string containing numbers).

Behavior :

- Standard POST behavior.
- Returns HTTP/1.1 status code 201 if the request was successful.
- Any other special return and/or exception codes.

ID Management :

The response provides the productSpecification id.

Specify the attributes required when an entity is created (and their default values if not):

| Attribute name | Mandatory | Default | Rule |
|--------------------------------|-----------|---------|--|
| name | Y | | |
| isBundle | N | false | |
| bundledProductSpecification | Y | | If isBundle is set to "true", bundledProductSpecification is mandatory |
| productSpecCharacteristic | Y | | |
| productSpecCharacteristicValue | Y | | |

- Further specify any rules on the creation of the entity

| Rule name | Rule |
|-----------|------|
| | |

| REQUEST |

POST catalogManagement/importJob

ImportJob Tasks are created as resources.

The ImportJob is attached to the URL of the root resource where the content of the file specified by the ImportJob will be applied.

For example to apply the content of the import file located at <ftp://ftp.myCatalog.com/catalog.json> to the catalogManagement root.

| REQUEST |
|--|
| POST ../partyManagement/importJob Content-type: application/json <pre>{ "url": "ftp://ftp.myCatalog.com/catalog.json" }</pre> |
| RESPONSE |
| 201 Content-Type: application/json Location: ../partyManagement/importJob/554 <pre>{ "id": "54", "href": "http://api/catalogManagement/importJob/54", "status": "running", "path": "catalogManagement/", "content-type": "application/json", "errorLog": "", "creationDate": "2013-04-19T16:42:23-04:00", "url": "ftp://ftp.myCatalog.com/catalog.json" }</pre> |

POST catalogManagement/exportJob

ExportJob Tasks are created as resources.

The ExportJob is attached to a specific resource acting as the root for the collection of resources to be streamed to a File.

An ExportJob can be attached to a specific Resource in the Catalog Management application for example:

- ../catalogManagement/exportJob
Export all the resources within catalogManagement subject to query and path

assignments.

- `../catalogManagement/catalog/2/exportJob`
Export all the resources within the catalog with “id” = 2 subject to query and path assignments.

For example:

| REQUEST |
|---|
| POST <code>../catalogManagement/exportJob</code> Content-type: application/json <pre>{</pre> |
| RESPONSE |
| 201 Content-Type: application/json Location: <code>../catalogManagement/exportJob/54</code> <pre>{ "id": "54", "href": "http://api/catalogManagement/exportJob/54", "status": "running", "path": "catalogManagement", "content-type": "application/json", "errorLog": "", "creationDate": "2013-04-19T16:42:23-04:00", "completionDate": "", "url": "ftp://ftp.catalogManagement.com/catalog/54" }</pre> |

GET catalogManagement/exportJob

ExportJob resources can be found under the API/exportJob collection and may be retrieved using the normal GET constructs for individual resources or queries on the exportJob collection i.e GET ../catalogManagement/exportJob/?(name=value)*

For example:

| REQUEST |
|--|
| GET ../catalogManagement/exportJob/54 Content-type: application/json { } |
| RESPONSE |
| 200 Content-Type: application/json { "id": "54", "href": "http://api/catalogManagement/exportJob/54", "status": "running", "path": "catalogManagement/", "content-type": "application/json", "errorLog": "", "creationDate": "2013-04-19T16:42:23-04:00", "completionDate": "2013-04-21T16:42:23-04:00", "url": "ftp://ftp.catalogManagement.com/catalog/54" } |

GET catalogManagement/importJob

ImportJob resources can be found under the API/importJob collection and may be retrieved using the normal GET constructs for individual resources or queries on the importJob collection. GET ../catalogManagement/importJob/?(name=value)*

For example:

| REQUEST |
|---|
| <pre>GET ../catalogManagement/importJob/54 Content-type: application/json { }</pre> |
| RESPONSE |
| <pre>200 Content-Type: application/json { "id": "54", "href": "http://api/catalogManagement/importJob/54", "status": "running", "path": "catalogManagement", "content-type": "application/json", "errorLog": "", "creationDate": "2013-04-19T16:42:23-04:00", "completionDate": "2013-04-21T16:42:23-04:00", "url": "ftp://ftp.myCatalog.com/catalog.json" }</pre> |

DELETE API/{RESOURCE}/{ID}

No delete operations

This Uniform Contract operation is used to delete a managed entity or a task.

Description :

- Provide an overall description of the Operation
- Describe if the resource represents a managed entity or a task.
- Describe the structure of the identifier.

Behavior :

- What status and exception codes are returned.
- Returns HTTP/1.1 status code 200 if the request was successful.
- Any other special return and/or exception codes.

| |
|----------------------------|
| REQUEST |
| DELETE API/{RESOURCE}/{ID} |
| RESPONSE |
| 200 |

Example see TMF REST Design Guidelines.

API NOTIFICATION TEMPLATES

REGISTER LISTENER POST /hub

Description :

Sets the communication endpoint address the service instance must use to deliver information about its health state, execution state, failures and metrics. Subsequent POST calls will be rejected by the service if it does not support multiple listeners. In this case DELETE /api/hub/{id} must be called before an endpoint can be created again.

Behavior :

Returns HTTP/1.1 status code 204 if the request was successful.

Returns HTTP/1.1 status code 409 if request is not successful.

| REQUEST |
|---|
| POST /api/hub Accept: application/json <pre>{ "callback": "http://in.listener.com" }</pre> |
| RESPONSE |
| 201 Content-Type: application/json Location: /api/hub/42 <pre>{"id":"42","callback":"http://in.listener.com","query":null}</pre> |

UNREGISTER LISTENER DELETE hub/{id}

Description :

Clears the communication endpoint address that was set by creating the Hub.

Behavior :

Returns HTTP/1.1 status code 204 if the request was successful.

Returns HTTP/1.1 status code 404 if the resource is not found.

| REQUEST |
|----------------------|
| DELETE /api/hub/{id} |

| |
|--------------------------|
| Accept: application/json |
| RESPONSE |
| 204 |

publish {EventTYPE} POST /listener

Description :

Provide the Event description

Behavior :

Returns HTTP/1.1 status code 201 if the service is able to set the configuration.

| |
|--|
| REQUEST |
| POST /client/listener Accept: application/json { "event": { EVENT BODY }, "eventType": "eventType" } |
| RESPONSE |
| 201 Content-Type: application/json |

LIFECYCLE MANAGEMENT EXTENSIONS TO CATALOG

In Lifecycle Management there is a requirement to distinguish between entities existing with different life cycle version numbers and accessible via different ACL mechanisms.

For example the same Product Offerings may exist in a Catalog but with different version numbers.

It may be possible for an administrator to see all the existing versions or for a partner to see only a subset of all the existing versions.

The entity version number is not dependent on the version number of the API. For example in PLM the same API (running at a specific version number) may be used to retrieve entities with different PLM version numbers.

In order to distinguish resources representing entities running with different version numbers and accessible through the same API version the following directive can be used `/id:(version=x)` and the version attribute is added to each entity.

```
{
  "id": "42",
  "href": "http://serverlocation:port/catalogManagement/productOffering/42",
  "version": "1.0",
  "lastUpdate": "2013-04-19T16:42:23-04:00",
  "name": "Virtual Storage Medium",
  "description": "Virtual Storage Medium",
  "isBundle": "true",
  "lifecycleStatus": "Active",
  .....
}
```

Note that the catalog resources in this case may have the same ID but may be distinguished by the inclusion of the version number in their ID i.e `/42:(version=1.0)`, `/42:(version=2.0)`.

In the following examples we will assume that two versions of the VirtualStorage Product Offer exist in the Product Catalog. The Inactive and Active versions respectively version 1.0 and version 2.0.

Query all versioned catalog resources

Users with different roles may have access to different versions of the entities in the catalog. For example user A may have access to only the version 1.0 of the entities while user B may have access to version 1.0 and version 2.0.

Admin user of Catalog have access to all the versions of the resources while non admin users have by default access to only the latest version of the entities in the Catalog.

For example the following request on the admin endpoint will return all the versioned resources matching a specific ID.

| REQUEST |
|---|
| GET api/admin/catalogManagement/productOffering/?id=VirtualStorage Accept: application/json |
| RESPONSE |
| 200 Content-Type: application/json <pre> [{ "id": " VirtualStorage ", "href": "http://serverlocation:port/catalogManagement/productOffering/VirtualStorage", "version": "1.0", "lastUpdate": "2013-04-19T16:42:23-04:00", "name": "Virtual Storage Medium", "description": "Virtual Storage Medium", "isBundle": "true", "lifecycleStatus": "InActive", }, { "id": " VirtualStorage ", "href": "http://serverlocation:port/catalogManagement/productOffering/ VirtualStorage ", "version": "2.0", "lastUpdate": "2013-04-19T16:42:23-04:00", "name": "Virtual Storage Medium", "description": "Virtual Storage Medium", }] </pre> |

```

    "isBundle": "true",
    "lifecycleStatus": "Active",
    .....
  }
]

```

Query a specific versioned CATALOG resource

In general a non admin API user only has visibility to the latest version number or visibility to a subset of versioned catalog resources.

It may be possible for an admin API user to retrieve a resource with a specific version number by using an ID and versioning filtering criteria.

| REQUEST |
|---|
| GET api/admin/catalogManagement/productOffering/?id=VirtualStorage&version=1.0 Accept: application/json |
| RESPONSE |
| 200 Content-Type: application/json <pre> [{ "id": "42", "href": "http://serverlocation:port/catalogManagement/productOffering/42", "version": "1.0", "lastUpdate": "2013-04-19T16:42:23-04:00", "name": "Virtual Storage Medium", "description": "Virtual Storage Medium", "isBundle": "true", "lifecycleStatus": "Active", }] </pre> |

Query current version of a catalog resource

By default only the most current version is returned (for admin and non admin).

| REQUEST |
|--|
| GET api/admin/catalogManagement/productOffering/VirtualStorage Accept: application/json |
| RESPONSE |
| 200 |

Content-Type: application/json

```
{
  "id": "42",
  "href": "http://serverlocation:port/catalogManagement/productOffering/42",
  "version": "2.0",
  "lastUpdate": "2013-04-19T16:42:23-04:00",
  "name": "Virtual Storage Medium",
  "description": "Virtual Storage Medium",
  "isBundle": "true",
  "lifecycleStatus": "Active",
  .....
}
```

Create new version of a CATALOG resource

POST is used to create a new version of a catalog resource.

The constraint is that the version numbers for the resource having the same ID must differ.

REQUEST

POST catalogManagement/productOffering
Content-type: application/json

```
{
  "id": "VirtualStorage",
  "version": "3.0",
  "name": "Virtual Storage Medium",
  "description": "Virtual Storage Medium",
  "isBundle": "true",
  "lifecycleStatus": "Active",
  "validFor": {
    "startDateTime": "2013-04-19T16:42:23-04:00",
    "endDateTime": "2013-06-19T00:00:00-04:00"
  },
  ...
}
```

RESPONSE

201
Content-Type: application/json

```
{
  "id": "VirtualStorage",
  "href": "http://serverlocation:port/catalogManagement/productOffering/42",
  "version": "3.0",
  "lastUpdate": "2013-04-19T16:42:23-04:00",
  "name": "Virtual Storage Medium",
  "description": "Virtual Storage Medium",
  "isBundle": "true",
  .....
```

```

    "lifecycleStatus": "Active",
    "validFor": {
        "startDateTime": "2013-04-19T16:42:23-04:00",
        "endDateTime": "2013-06-19T00:00:00-04:00"
    },
    ...
}

```

Modify an existing version of a CAtalog resource

By default PATCH or PUT will be acting only on the latest version of a Catalog Resource. For example PATCH `./.../productOffering/VirtualStorage` will only update the VirtualStorage ProductOffering at Version 2.0 (which is the most current).

To update a specific version of an entity the (Version=X) directive is added to the ID (i.e `/id:(version=x)`).

Note that this capability is only available to API users having the proper authorizations to change the catalog entities with specific version numbers.

For example to change the VirtualStorage versioned at 1.0 we could use `/productOffering/VirtualStorage(Version=1.0)`

REQUEST

PATCH `/catalogManagement/productOffering/VirtualStorage(Version=1.0)`
 Content-type: application/json-patch+json

```

{
  "lifecycleStatus": "Active"
}

```

RESPONSE

201
 Content-Type: application/json

```

{
  "id": "VirtualStorage",
  "href": "http://serverlocation:port/catalogManagement/productOffering/VirtualStorage",
  "version": "1.0",
  "lifecycleStatus": "Active",
  .....
}

```

Role based Access Control

The user presents their credentials for authentication

If the credentials are valid

1. The user is given access to the catalog
2. As defined by their role(s)
3. As defined by their access rights
4. As defined by the access type: CRUD, discover
5. As defined by the pre-defined filter

For example if they issue a get on a catalog that a party has no access they get an error response

Or if they try to modify an area of the catalog but do not have Write Access they get an error response

Normally we anticipate that the OAUTH2 or Open ID Connect are used as the authorization APIs and that ACL are establisher between authorized parties with regards to the content of the Catalog (i.e GET but also enable of update operations on specific entities).

Release History

| Release Number | Date | Release led by: | Description |
|----------------|------------|---|--|
| Release 1.0 | 04/15/2013 | Pierre Gauthier TM Forum pgauthier@tmforum.org | First Release of Draft Version of the Document. |
| Release 1.1 | | | Updated for use in the Paris Spec Jam – and rebranded. |
