

# Automation Compositions Model Driven Life Cycle Management for R-Apps in the Cloud

Liam Fallon

# What is an Automation Composition?

# Containers and Metadata.... Everywhere.....

....but not an App in sight!

....ACM allows you to **Manage your Apps**

# Where is my App?

 Arbitrary Container

 Platform Container

 App 1

 App 2

 App 3

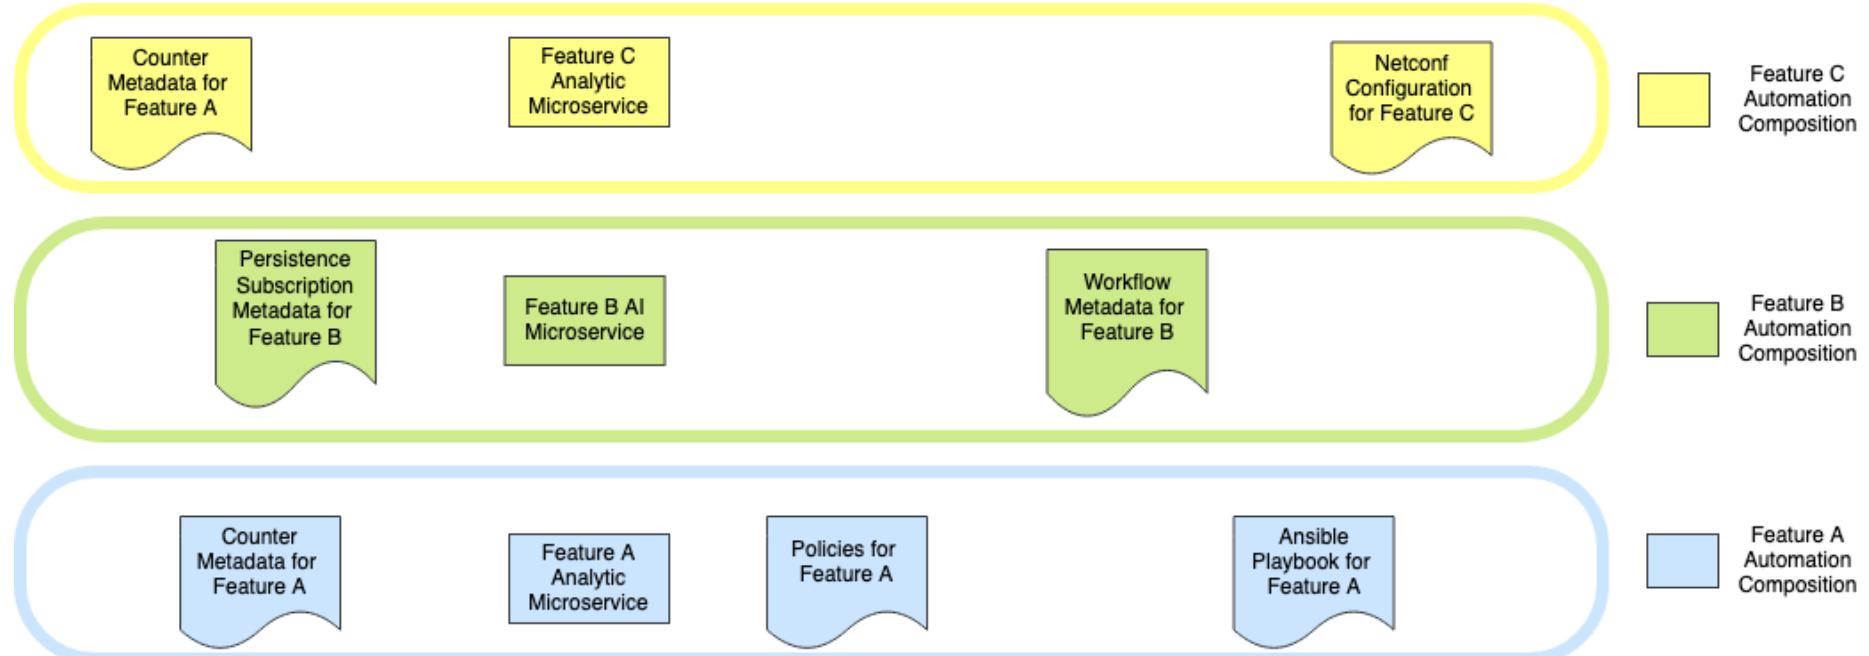

Helm just installs and uninstalls the containers

# Microservices and Metadata delivering features

# Automation Compositions

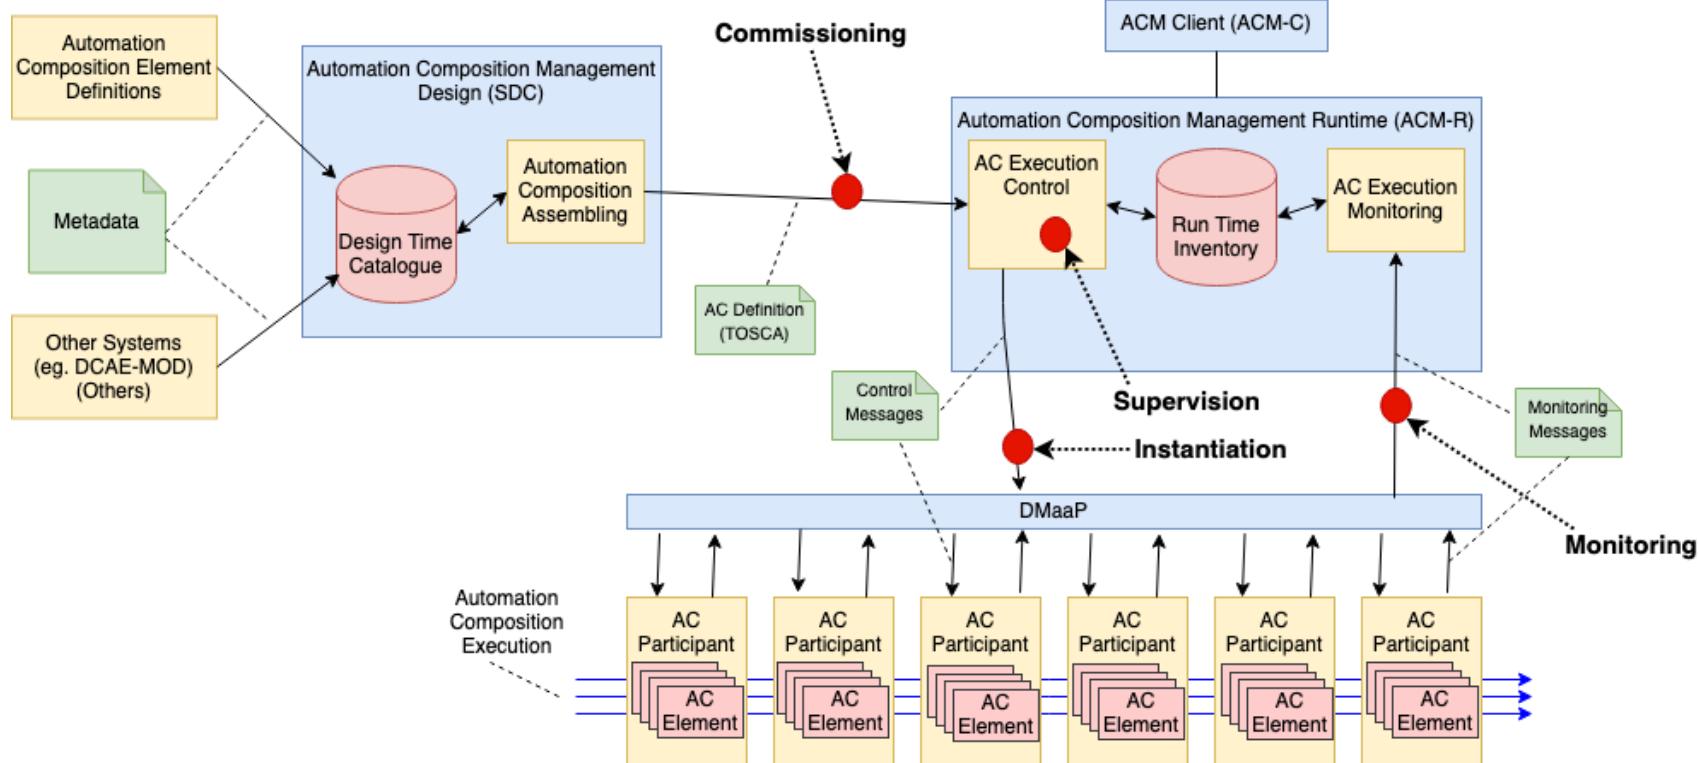

Groups the microservices and metadata for features together

# How does an Automation Composition work?

# What is Supported?

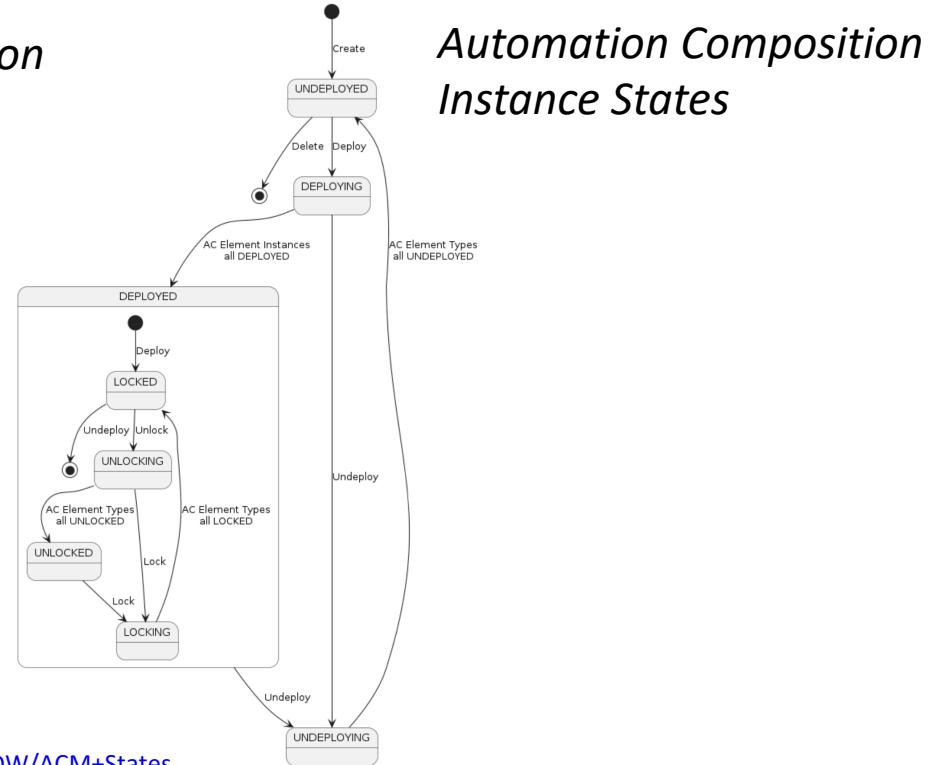

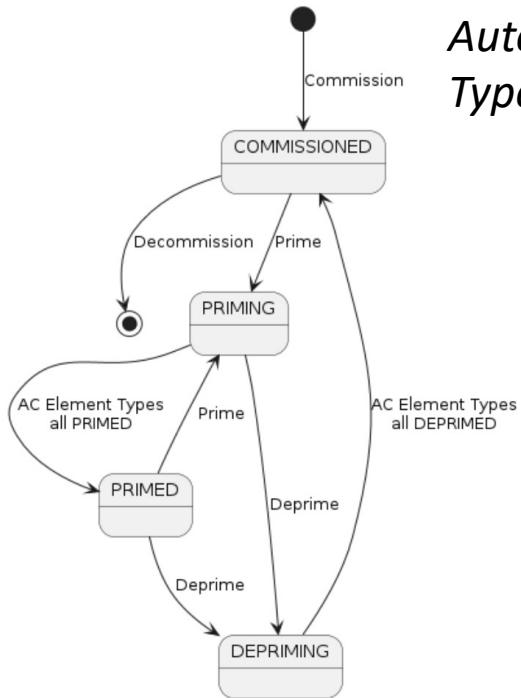

- Defining Automation Compositions
- Automation Composition Commissioning and Decommissioning
- Set parameters on Automation Compositions
- Managing the Automation Composition life cycle
  - Instantiation
  - Status Monitoring
  - State Change
  - Removal

# Automation Composition Management

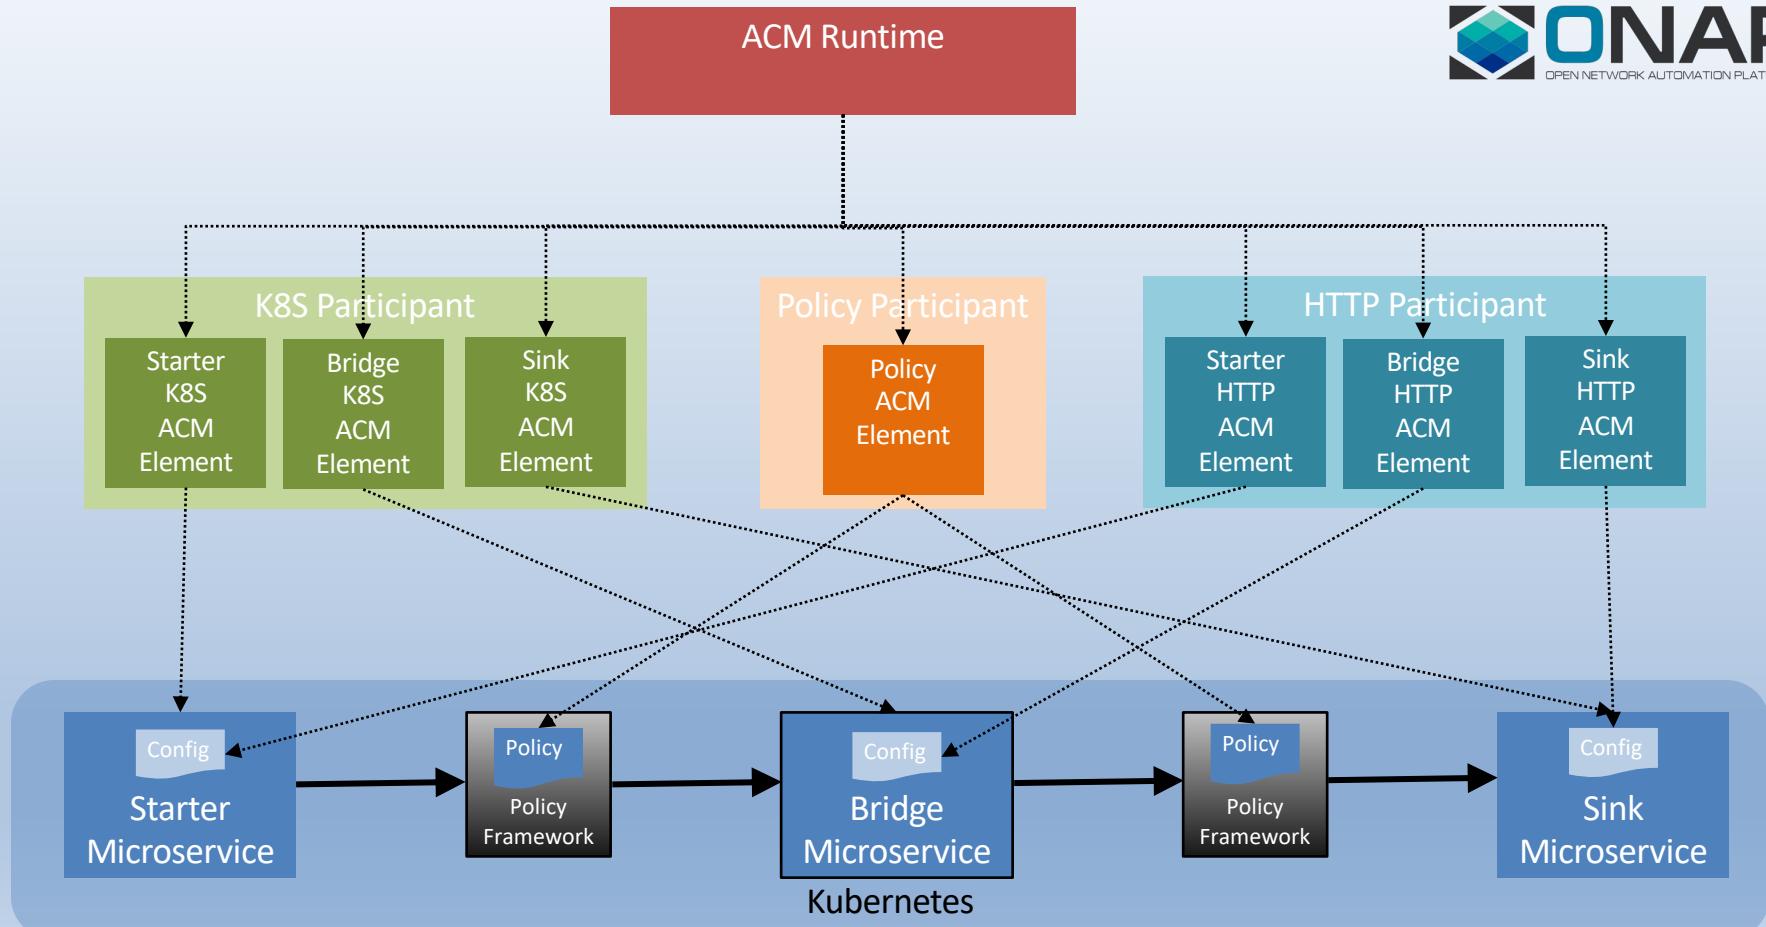

# Lifecycle Management States in ACM

# The ACM Demo

# Demonstration Automation Composition Model

Defined in TOSCA (YAML)

```
onap.policy.clamp.ac.element.AutomationCompositionDefinition:  
  type: org.onap.policy.clamp.acm.AutomationComposition  
  description: Automation composition for Demo  
  properties:  
    provider: ONAP  
    elements:  
      - name: onap.policy.clamp.ac.element.Policy_AutomationCompositionElement  
      - name: onap.policy.clamp.ac.element.K8S_StarterAutomationCompositionElement  
      - name: onap.policy.clamp.ac.element.K8S_BridgeAutomationCompositionElement  
      - name: onap.policy.clamp.ac.element.K8S_SinkAutomationCompositionElement  
      - name: onap.policy.clamp.ac.element.Http_StarterAutomationCompositionElement  
      - name: onap.policy.clamp.ac.element.Http_BridgeAutomationCompositionElement  
      - name: onap.policy.clamp.ac.element.Http_SinkAutomationCompositionElement
```
