TMF640 Service Activation and Configuration API REST Specification R18.5.0

The REST API for Activation and Configuration allows the user to retrieve, create, update, delete services and retrieve the monitor resource used to monitor the execution of asynchronous requests on a specific resource. Although all the examples given in the API specification are relative to Services, the same API can be used to Activate and Configure Services or Resources.

Latest Update: TM Forum Release 18.5.0	**Status: Member Evaluation**
Version: 4.0	**IPR Mode: RAND**
