TMF673 Geographic Address API User Guide v4.0

Provides a standardized client interface to an Address management system. It allows looking for worldwide addresses. It can also be used to validate geographic address data, to be sure that it corresponds to a real geographic address. Finally, it can be used to look for a geographic address by: searching an area as a start (city, town ...), then zooming on the streets of this area, and finally listing all the street segments (numbers) in a street.

Release Status: Pre-production	Approval Status: Team Approved	
Version: 4.0.0	IPR Mode: RAND
