TMF915 AI Management API Component Suite User Guide v4.0

The API Component Suite for AI Management defines the set of operations that should be offered in order that a Service Provider can govern Artificial Intelligence systems deployed at scale. Effective governance and management of AI must span the lifecycle from design through deployment and eventual withdrawal from service. However, the initial focus of the AI Management API is restricted to the in-life aspects of AI and in particular on the management of 'model contracts'.

Release Status: Pre-production	Approval Status: Team Approved
Version: 4.0.0	IPR Mode: RAND
