TMF654B Prepay Balance API Conformance Profile v4.0.0

Through this API, any Enterprise is able to manage the balance, recharge (top-up), transfer, reserve, unreserve, deduct and balance adjustments of a bucket. A bucket is understood in the context of this API to be an entity that keeps track of the balance available to use services. Every bucket will measure balance in different units, it can be monetary or non-monetary (e.g. number of SMS that are available, number of GB of data available.
