TMF673B Geographic Address API Conformance Profile v4.0.0

The Geographic Address API provides a standardized client interface to an Address management system. It enables searching for worldwide addresses. It can also be used to validate geographic address data, to be sure that it corresponds to a real geographic address. Finally, it can be used to look for a geographic address by: searching an area as a start (city, town …), then zooming in on the streets of this area, and finally listing all the street segments (numbers) in a street.

Team Approved Date: 02-Oct-2020

Release Status: Pre-production	Approval Status: Team Approved
Version: 4.0.0	IPR Mode: RAND
