

TMF688 Event Management API User Guide v4.0.0

This document is the specification of the REST API for Event management. It includes the model definition as well as all available operations.

TMF APIs already support the capability of publishing Events to subscribers using pub/hub pattern over REST (using a Hub Resource see Design Guideline Part 1, section 12).

The current pub/hub subscribe pattern uses call-back based mechanism to deliver events to subscribers.

Team Approved Date: 07-Dec-2020
