

# TMF688B Event API Conformance Profile v4.0.0

The Event Management API provides a standardized client interface to the enterprise event management system for creating, managing and receiving service-related events to (indicatively) drive automation workflows, notify other service providers of service outages and SLA violations, trigger Trouble Ticket creation, and enable more complex orchestration scenarios between management systems. The Event Management API can also be used to convey business level Events in support of other processes.

**Team Approved Date: 26-May-2021**
