

Overview

The Billing API provides standardized mechanisms for billing account, bill item and settlement note advice management either in B2B or B2B2C contexts. It allows creation, update and retrieval of a billing account either in a B2B2C relationship context (creation of mass market customer billing account within a "Billing on Behalf of" process for example) or in a B2B context (creation of a billing account for a partner or B2B customer). It allows also creation and query of bill items allowing partners or B2B customer to check their invoice. In addition, it allows notification of settlement note advice to partners who can, then, query it.
