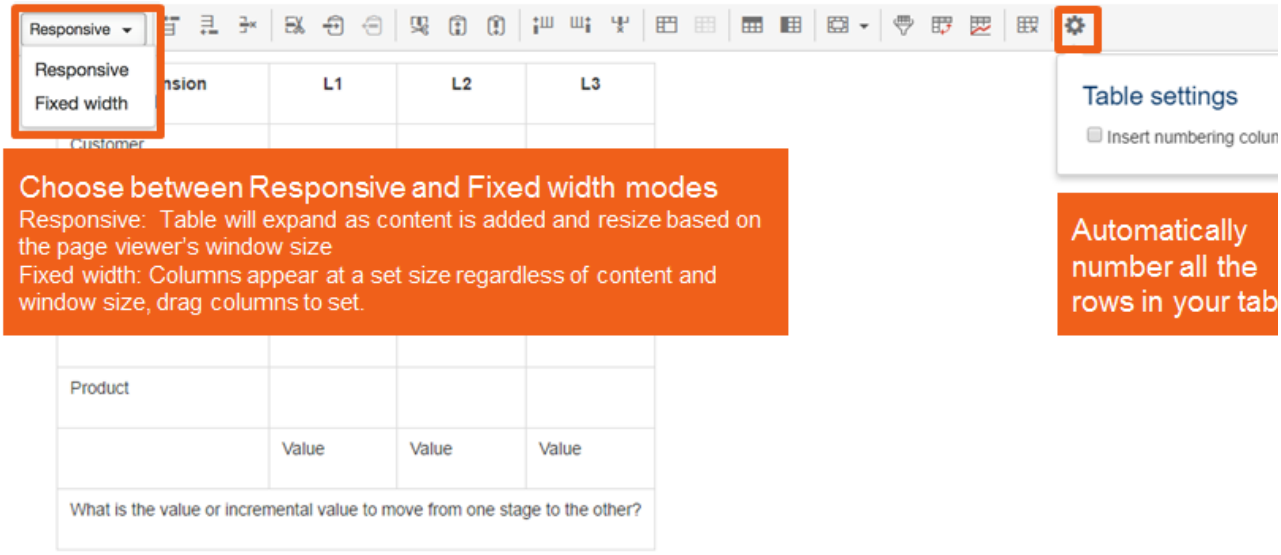
Table Improvements

There is now more flexibility and features when working with tables

- Column settings
- Select, Cut and paste table columns
- Example table
- Sticky headings
- Keyboard shortcuts

Column settings



Best practice: Use Responsive tables

Best practice is to use Responsive mode. This is the default and ensures that Confluence content will display well on mobile devices

Select, Cut and paste table columns

Another highly requested feature is to be able to select, cut/copy and paste table columns. Previously this was only available for table rows

Example table

This is an exmaple of a with fixed width columns, a numbering column and a filter for all 3 columns.

	Column 1	Column 2	Column 3
1	plant	rose	wheat
2	tree	rose	grass
3	tree	rose	wheat
4	tree	daisy	grass

Sticky headings

© TM Forum 2021.

	User Story Title	User Story Description	Priority	Notes
				• Text status updates • Mentions • Support for images • Smart embedding for things like YouTube videos etc..
4	Calendar	A user wants to be able to post status updates on the go.	Should have	• It would be great if they could get this in mo view. • List view is a nice to have.
5	API	A developer wants to integrate with the mobile app so they can embed the activity stream on their website	Should have	
6	Twitter Integration	A user wants to sign up via Twitter	Nice to have	• We should chat to Team Dyno as they did something similar.
7	Instagram Integration	A user wants to be able to post pictures from the Teams in Space app directly to Instagram.	Nice to have	• There has also been some research on this (see Twitter Integration prototype)

A note on sticky headers

In some instances table header rows will stick to the top of the page you're viewing, making those really long tables easier to read!

Please note that table headers will not stick when your table:

- Is inside a page layout or inside another table.
- Has no header row or there are cells in the top row that aren't marked as headers.
- Has a header column, instead of a header row, and scrolls horizontally.
- Contains another table, that has its own header row.

Keyboard shortcuts

Windows	Action	Mac OS X
Ctrl+Shift+c	Copy the current table row, or the selected rows.	Cmd+Shift+c
Ctrl+Shift+i	Insert a table. (Opens the Insert Table dialog.)	Cmd+Shift+i
Ctrl+Shift+v	Paste the table rows from your clipboard, placing them above the current row.	Cmd+Shift+v
Ctrl+Shift+x	Cut the current table row, or the selected rows.	Cmd+Shift+x
Alt+Up Arrow	Add a row above the current row.	Alt+Up Arrow
Alt+Down Arrow	Add a row below the current row.	Alt+Down Arrow
