

# productOrdering API Salesforce Mapping

/orderManagement/productOrder/{ID}

## Supported Methods

GET, PATCH, PUT

## Description

The customerAccount service is primarily mapped to the Salesforce Order objects. The service can either be used to retrieve a collection or a specific record (using {ID} at the end of the service). This service is partially supported (i.e. only fields and sub entities that conform to Salesforce model are mapped).

RESOURCE	ELEMENT	SALESFORCE FIELD	OTB MAPPING
{			
	id	Order.Id	YES
