

TMF650 Onboarding Management API REST Specification

R16.0.1

The Onboarding API provides standardized mechanisms for managing an onboarding process.

The following resources are managed by this API:

- **PartnershipType**: Identifies a type of a partnership between parties, including the list of roles types that are permitted (i.e Buyer, Seller, Developer). Role types may refer to agreement specifications to be signed by parties playing the role.
- **PartyRole**: An instantiation of one of the party roles defined for a partnership type. Represents the fact that a given *party* will play a given identified role type in the context of a partnership type.

The API allows the retrieval, creation, update and deletion of partnership type and its owned sub-resources.
