TMF637 Product Inventory Management API REST Specification R16.5.1

The Product Inventory Management API provides a standardized mechanism for product inventory management such as creation, partial or full update and retrieval of the representation of a product in the inventory. It also allows the notification of events related to the product lifecycle.

Modifications in this release are as follows:

- Added priceAlteration entity to manage discount defined during the order process
- A product could be delivered at different places. So, added an array of places.
