

TMF668 Partnership Type Management API REST Specification R17.0.1

The Partnership Type API provides standardized mechanisms for creating partnership types. It is one of the APIs involved in an onboarding process.

The following resources are managed by this API:

- **PartnershipType:** Identifies a type of a partnership between parties, including the list of roles types that are permitted (i.e Buyer, Seller, Developer). Role types may refer to agreement specifications to be signed by parties playing the role.

The API allows the retrieval, creation, update and deletion of partnership type and its owned sub-resources.
