

TMF674 Geographic Site API REST Specification R17.5.0

This API defines a Site as a convenience class that allows to easily refer to places important to other entities, where a geographic place is the entity that can answer the question “where?”, determining where things are in relation to the earth’s surface, and can be represented either in a textual structured way (geographic address) or as a geometry referred to a spatial reference system (geographic location)

Latest Update: TM Forum Release 17.5.0	Status: Member Evaluation
Version: 1.0.4	IPR Mode: RAND
