TMF677 Usage Consumption API REST Specification R17.5.0

This API covers the consumption follow up function providing ongoing information about usages related to any subscribed communication products (voice, data, TV,…) without having to wait the invoice production. These information may concern usages charged on a bucket supervised or not and so the remaining credits on the bucket. It allows customers or users to be informed on usages done and remaining credits on the buckets that they consume under their purchased offers and options.

Latest Update: TM Forum Release 17.5.0	Status: Member Evaluation
